## RIMAS NT/P Feature Spotlight...

### Touch Screen Tag Entry

The Commodity Inventory Tag Entry program is now available in a touch screen format for use with touch screen monitors. Instead of using a mouse to click on the fields, the entry fields activate when touched. An on-screen keyboard is provided for entering information manually.

The screenshot shows the 'C/I Tagged Inventory Entry' window. Fields include: Tag # (100015), Account (PAGE), Commodity (AC-B), Source (10047), Description (Aluminum Cans - Baled), Yard (1), Prod Date (05/15/2000), Location (Baler\_Sm), Gross (3,000), Packaging (BALE), Tare (0), Pkg Count (3), Net (3,000), and a Comment field. An on-screen keyboard is displayed below the form with keys for letters, numbers, and symbols. Buttons for '+', 'Clone', 'Tag', and 'Close' are at the bottom.

The touch screen entry program consists of the fields found on the Header tab of the main Tagged Entry program and does not include the Chemistries, Analysis, or Import tabs. Limiting the fields minimizes the amount of entry time to only the most important information and allows tags to be entered quickly.

Touch any of the fields to enter a value using either the keyboard on the screen or to select from a Lookup. The ellipses button next to the fields opens the Lookup screens from which the user can select values.

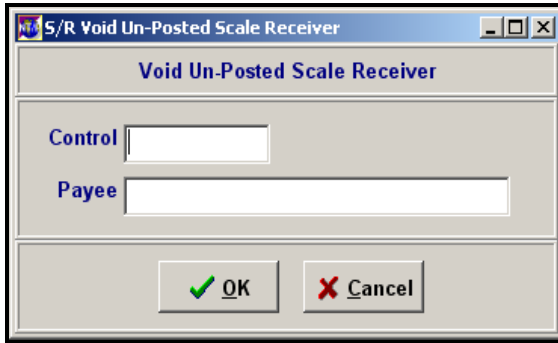

The Touch Screen version of the Tagged Inventory Entry program only appears if *Touch Layout* is selected in the Station Defaults. Touch Screen Tag Entry is best viewed when maximized, which can also be defaulted.

The screenshot shows the 'C/I Tag Entry Station Defaults' window. It includes a message 'Use <F2> to reactivate this window.' and options for 'Touch Screen Layout' (checked) and 'Touch Screen Maximized' (unchecked). Other fields include 'Yard' (dropdown), 'Tag Prt.' (dropdown), 'Tag Copies' (spinner set to 1), and 'Tag Form' (text field). 'OK' and 'Cancel' buttons are at the bottom.

In order to use the Touch Screen Tag Entry program you must be licensed to use RIMAS NT/P's touch screen programs. Contact Shared Logic for more information on being licensed to access the touch screen features.

## Void Un-Posted Scale Receivers

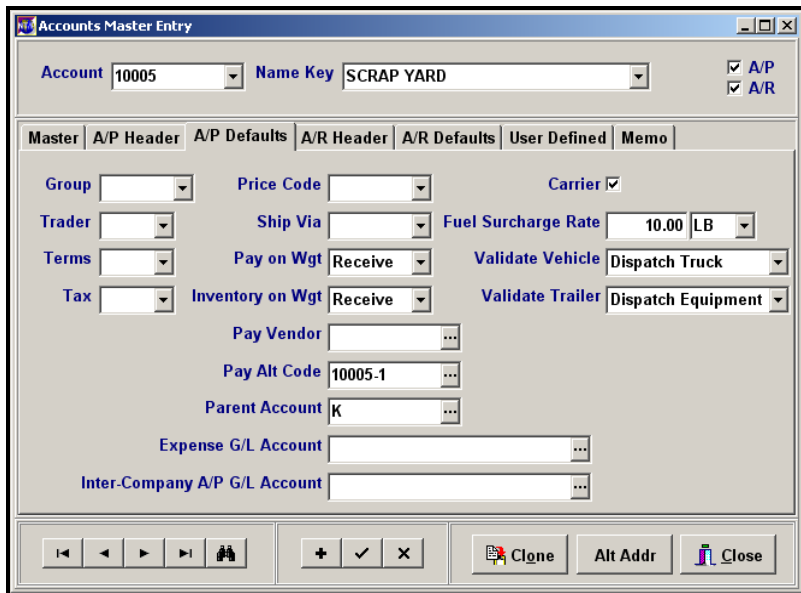

The Void Un-Posted Scale Receivers program found in Scale Receiving, is used to void un-posted scale tickets. Once a Receiver has been voided it is not available in the Scale Entry programs any longer.

When a scale ticket is voided an additional receiver is created using the same Control Number with a V added at the end, and with negative weights. This alteration of the original Control Number shows that the original ticket existed and then was voided. A replacement receiver is not created (like it does in the Reverse/Reject program), as that is the responsibility of the operator. If the scale ticket has been posted the Reverse/Reject program will still need to be used.

## Vehicle/Trailer Field Validation

Two new fields in the Accounts Master program make it possible to limit the type of vehicles that can be selected for a Carrier in the *Vehicle* and *Trailer* fields found in many of the RIMAS entry programs. In Accounts Master the *Validate Trailer* and *Validate Vehicle* fields contain the options 'Dispatch Truck', 'Dispatch Equipment' and 'Freight Vehicle.' Selecting one of these options limits the Lookups for the Trailer and Vehicle fields to only include those types of vehicles.
